Preface *xiii*

1 The origin, distribution and genetic diversity of temperate tree fruits 12

A.D. Webster

- 1.1 Introduction 1
- 1.2 Apple 1
 - 1.2.1 Taxonomy of the cultivated apple and closely related species 1
 - 1.2.2 Origin of the cultivated apple and distribution of apple production 1
 - Commercial uses of apples* 2
 - 1.2.3 Other *Malus* species used in fruit production 3
- 1.3 Pear 3
 - 1.3.1 Taxonomy of the pears and closely related species 4
 - European Pears* 4
 - Asian Pears* 4
 - 1.3.2 Origin of the cultivated pears and distribution of their production 4
 - Commercial uses of pears* 4
 - 1.3.3 Other *Pyrus* species of interest in fruit production 4
- 1.4 Plum 4
 - 1.4.1 Taxonomy of the cultivated plums and closely related species 5
 - 1.4.2 Origin of the cultivated plums and the distribution of their production 5
 - Commercial uses of plums* 5
 - 1.4.3 Other plum species used in fruit production 5
- 1.5 Cherry 6
 - 1.5.1 Taxonomy of the cultivated sweet cherry and closely related species 6
 - 1.5.2 Origin of the edible cherries and distribution of their production 7
 - Commercial uses of cherries* 7
 - 1.5.3 Other cherry species used in fruit production 7
- 1.6 Apricot 8
 - 1.6.1 Taxonomy of the cultivated apricot and closely related species 8
 - 1.6.2 Origin of the apricot and distribution of its production 8
 - Commercial uses of apricots* 8
 - 1.6.3 Other species used for apricot production 8
- 1.7 Peach/nectarine 9
 - 1.7.1 Taxonomy of the cultivated peach/nectarine and closely related species 9
 - 1.7.2 Origin of the peach/nectarine and distribution of production 9
 - Commercial uses of peaches and nectarines* 10
 - 1.7.3 Other species of peach 10
- 1.8 Modern phylogenetic and other studies using techniques of molecular biology 10
- 1.9 Nutritional values of fruits 11

2 Sites and soils for temperate tree-fruit production: their selection and amelioration 12

A.D. Webster

- 2.1 Introduction 12
- 2.2 Climatic considerations in choosing sites for orchards 12

- 2.2.1 Major climatic zones and their suitability for temperate fruit production 12
- 2.2.2 Local climatic conditions 13
- 2.2.3 Climate change and global warming 14
- 2.3 Soil (edaphic) considerations in choosing sites for orchards 14
 - 2.3.1 Soil texture, structure and depth 14
 - 2.3.2 Soil nutrient holding capacity 14
 - 2.3.3 Soil drainage, aeration and water holding capacity 15
 - 2.3.4 Soil pH 15
 - 2.3.5 Soil organic matter 15
 - 2.3.6 Soil fertility and tree nutrition 15
 - Nitrogen (N)* 15
 - Phosphorus (P)* 16
 - Potassium (K)* 16
 - Calcium (Ca)* 16
 - Magnesium (Mg)* 16
 - Sulphur (S)* 16
 - Minor or trace elements* 16
 - 2.3.7 Fruit species and their optimum soil types 16
 - 2.3.8 Soil flora and fauna 16
- 2.4 Other important considerations when choosing an orchard site 17
 - 2.4.1 Site topography, aspect and natural shelter 17
 - 2.4.2 Special site features for organic fruit production 17
 - 2.4.3 Availability of water for irrigation 17
 - 2.4.4 The previous cropping history of the site 17
 - 2.5 New techniques used in site selection 18
 - 2.6 Modification or improvement of unsuitable sites 18
 - 2.6.1 Improving shelter from winds 18
 - 2.6.2 Reducing the risk of spring frosts and alleviating the damage they cause 18
 - 2.6.3 Reducing damage from hail 20
 - 2.6.4 Improving light interception by the trees 20
 - 2.6.5 Reducing the problems of excessive summer heat 21
 - 2.6.6 Reducing winter cold injury 21
 - 2.7 Amelioration of unsuitable soils 21
 - 2.7.1 Improving soil structure 21
 - 2.7.2 Improving soil drainage 21
 - 2.7.3 Changing soil pH 21
 - 2.7.4 Improving soil organic matter and nutrient content 21
 - 2.7.5 Overcoming the problems of soil borne pests and diseases 22
- 2.8 Production of temperate fruits in non temperate zones 22
 - 2.8.1 Production in the sub-tropics 22
 - 2.8.2 Production in the tropics 23
- 2.9 Production of temperate tree fruits under full or partial protective covering structures 23

3 Water relations 26

J. Tromp

- 3.1 Introduction 26
- 3.2 Physical aspects 26
 - 3.2.1 Structure of water 26
 - Cohesion and adhesion* 26
 - Water as a solvent* 26
 - Ice structure* 26
 - Viscosity* 27
 - Thermal properties* 27

- 3.2.2 Water potential 27
- 3.3 Transport from the soil, through the tree to the atmosphere 27
- 3.3.1 Water in the soil 27
 - Status 27
 - Transport 28
- 3.3.2 Absorption by the root 29
- 3.3.3 Flow in the xylem 29
 - Cavitation 30
- 3.3.4 Transpiration 30
 - Stomata 32
 - Capacitance 32
- 3.3.5 Osmotic adjustment 33
- 3.4 Measurement techniques 33
- 3.4.1 Water potential 33
 - Soil 33
 - Plant 33
- 3.4.2 Stomatal conductance 34
- 3.4.3 Transpiration 34
- 3.5 Practical implications 34
- 3.5.1 Drought 34
- 3.5.2 Irrigation 35
- 3.5.3 Effect on vegetative development 35
 - Root growth 35
 - Shoot growth 35
- 3.5.4 Effect on flower-bud formation 36
- 3.6 Flooding 36

- 4 Metabolic processes 39**
- J. Tromp**
- 4.1 Introduction 39
- 4.2 Organic chemicals 39
- 4.3 Photosynthesis 40
- 4.3.1 General aspects 40
- 4.3.2 Light 40
 - Response curve to radiation 42
- 4.3.3 Temperature 43
- 4.3.4 CO₂ concentration 43
- 4.3.5 Water 44
- 4.3.6 Effects of fruit bearing 44
- 4.3.7 Effect of leaf injury 45
- 4.4 Respiration 45
- 4.5 Phloem translocation and source-sink relations 46
- 4.5.1 General aspects 46
- 4.5.2 The mechanism of translocation 46
- 4.5.3 Source-sink relations 47
- 4.6 Nitrogen metabolism 48
- 4.7 Reserves 49
- 4.7.1 General aspects 49
- 4.7.2 Seasonal variation 49
- 4.7.3 Chemical composition 50
- 4.7.4 Environmental and cultural factors 50
- 4.8 Plant hormones 51
- 4.8.1 General aspects 51
- 4.8.2 Natural occurrence and action within the plant of the main hormone groups 52
 - Auxins 52
 - Gibberellins 52
 - Cytokinins 52
 - Ethylene 52
 - Abscisic acid 53

- 5 Mineral nutrition 55**
- J. Tromp**
- 5.1 Introduction 55
- 5.2 Mineral absorption 55
- 5.2.1 Soil 55
 - Ion adsorption and exchange 55
 - Transport 56
- 5.2.2 Roots 56
 - Anatomy 59
 - Actual absorption 57
 - Transverse transport 58
 - Upward transport 58
 - Relationship between ion- and water absorption 59
 - Root pressure 59
- 5.2.3 Foliar absorption 60
- 5.3 Function of minerals 61
- 5.3.1 Macronutrients 61
 - Nitrogen (N) 61
 - Phosphorus (P) 61
 - Sulphur (S) 62
 - Potassium (K) 62
 - Calcium (Ca) 62
 - Magnesium (Mg) 62
- 5.3.2 Micronutrients 62
 - Iron (Fe) 62
 - Manganese (Mn) 63
 - Zinc (Zn) 63
 - Copper (Cu) 63
 - Boron (B) 63
 - Molybdenum (Mo) 63
- 5.3.3 Salinity 63

- 6 Dormancy 65**
- J. Tromp**
- 6.1 Introduction 65
- 6.2 Para-dormancy 65
- 6.3 Endo-dormancy 66
- 6.3.1 Chilling requirement 66
- 6.3.2 Factors affecting chilling requirement 67
 - Pre-chilling conditions 67
 - Temperature 67
 - Irradiance 68
 - Leaching by winter rains 68
- 6.4 Eco-dormancy 69
- 6.5 Endogenous factors 70
- 6.5.1 Hormones 70
 - Auxin and cytokinins 70
 - Gibberellins 70
 - Abscisic acid 70
 - Ethylene 70
 - Polyamines 71
- 6.6 Practical implications 71
- 6.6.1 Temperate-zone regions 71
- 6.6.2 Sub-tropical regions 72
- 6.6.3 Tropical regions 72

- 7 Frost and plant hardiness 74**
- J. Tromp**
- 7.1 Introduction 74
- 7.2 Physical aspects 74
- 7.2.1 Types of frost 74
- 7.2.2 Supercooling 75
- 7.2.3 Desiccation 75
- 7.3 Tissue freezing 75
- 7.3.1 General 75
- 7.3.2 Freezing of xylem and phloem 76
- 7.3.3 Freezing of flower buds and vegetative buds 76
- 7.3.4 Freezing of roots 77
- 7.4 Cold hardening and dehardening 77
- 7.4.1 Hardening 77
- 7.4.2 Dehardening 78
- 7.4.3 Does dormancy play a role in hardiness? 80
- 7.5 Practical implications 80
- 7.5.1 Cultivar and rootstock 80
- 7.5.2 Pruning 81

- 7.5.3 Sunscald and frost cracks 81
- 7.5.4 Ice nucleation active bacteria 81
- 7.5.5 Carbohydrates 81
- 7.5.6 Bioregulators and other chemicals 82
- 8 Seed (generative/sexual) propagation of fruit trees and juvenility 84**
A.D. Webster
- 8.1 Introduction 84
- 8.2 Seedling rootstocks used for Rosaceous fruit species 84
- 8.2.1 Apple 84
- 8.2.2 Pear 84
- 8.2.3 Sweet and sour cherry 85
- 8.2.4 Peach/nectarine 85
- 8.2.5 Plum 85
- 8.2.6 Apricot 85
- 8.3 Seed production 85
- 8.3.1 Choice of mother plant 85
- 8.3.2 Mother plant management 85
- 8.3.3 Harvesting fruits for seed production 86
- 8.3.4 Drying and storage of seeds 86
- 8.4 Seed dormancy and viability 86
- 8.4.1 Methods of satisfying seed dormancy requirements 86
Seed stratification 87
Chemical treatments to reduce the need for stratification and aid seed germination 87
- 8.4.2 Testing seed viability 87
- 8.5 Seed germination 88
- 8.5.1 Seed morphology 88
- 8.5.2 Involvement of bioregulators and other chemicals in germination 88
- 8.5.3 Seed sowing and germination 88
- 8.6 Choice of an appropriate site and soil for production of seedling rootstocks 88
- 8.7 Preparation of the soil and the optimum time for seed sowing 89
- 8.8 Management of the nursery seed beds 89
- 8.9 Lifting and temporary storage of seedling-raised rootstocks 89
- 8.10 Seedling growth and juvenility 89
- 8.10.1 The causes of juvenility and phase change 90
- 8.10.2 Strategies for shortening the juvenile period 90
- 9 Vegetative (Asexual) propagation**
A.D. Webster and S.J. Wertheim
- 9.1 Introduction 93
- 9.2 Physiology of root initiation and development during vegetative propagation 93
- 9.3 Layering 94
- 9.3.1 Factors influencing stool and layer bed production 94
- 9.4 Hardwood cuttings 95
- 9.4.1 Factors influencing the success of hardwood cutting production 96
- 9.5 Semi-hardwood cuttings 97
- 9.6 Softwood cuttings 97
- 9.6.1 Factors influencing the success of softwood cutting production 97
- 9.7 Micropropagation and associated *in-vitro* methods of propagation 98
- 9.7.1 Factors influencing the success of micropropagation 99
- 9.8 Choice of nursery site and the planting out rootstocks for budding or grafting 100
- 9.9 Budding 101
- 9.9.1 Factors influencing the success of budding 101
- 9.10 Grafting 102
- 9.11 Pruning and training of the developing tree; one-year-old trees 102
- 9.12 Pruning and training of the developing tree; two-year-old trees 103
- 9.13 Routine Management of Nursery Trees 103
- 10 Roots and root growth 107**
A.D. Webster
- 10.1 Introduction 107
- 10.2 Function of roots 107
- 10.2.1 Uptake and translocation of water and minerals from the soil 107
- 10.2.2 Storage of carbohydrates and other substances 107
- 10.2.3 Metabolism of assimilates and hormones 107
- 10.2.4 Anchorage of the tree/plant 108
- 10.2.5 Multiplication and spread of the plant 108
- 10.2.6 Modification of scion growth and cropping 108
- 10.2.7 Adaptation of plants/trees to unfavourable edaphic conditions 108
- 10.2.8 Improvement of soil structure, stability and fertility 108
- 10.3 Types of roots 108
- 10.3.1 Morphology of the root 108
- 10.3.2 Anatomy of the root 109
- 10.3.3 Root hairs 109
- 10.4 Root growth 109
- 10.4.1 Initiation of new root growth 109
- 10.4.2 Root development and secondary thickening 109
- 10.4.3 Root density 110
- 10.4.4 Factors influencing root growth 110
Scion and rootstock 110
Soil type 110
Soil water content and aeration 110
Temperature of the soil 111
Mineral content of the soil and nutrient availability 111
Management influences on soil conditions 111
Biotic conditions in the soil 111
Competition with other roots 111
Tree management and the growth of other competing organs on the tree 112
- 10.5 Factors influencing root function 112
- 10.6 Root death and turnover 112
- 10.7 Root distribution in the soil (root architecture) 112
- 10.7.1 Factors influencing root distribution within the soil 113
Scion cultivar and rootstock 113
Soil type and conditions 113
Competition with other roots 113
- 10.8 The rhizosphere and associations between roots and fungi or other micro-organisms 114
- 10.8.1 Mycorrhiza 114
- 10.8.2 Mycorrhizae and their use in sustainable fruit culture systems 115
- 10.9 Root-shoot communications (signalling) 115
- 10.10 Methods used to study roots 116
- 10.11 Manipulation of root growth 116
- 10.11.1 Root pruning 116
- 10.11.2 Root restriction 116
- 10.11.3 Partial root zone drying 116
- 11 Shoot growth 120**
A.D. Webster
- 11.1 Introduction 120
- 11.2 Shoots produced by Rosaceous fruit tree species 120
- 11.2.1 Shoot morphology 120
- 11.3 Leaves produced by Rosaceous fruit species 122
- 11.3.1 Leaf morphology 122
- 11.4 Juvenility and adventitiousness 122
- 11.5 Function of shoots and leaves 122

- 11.6 Shoot and leaf growth and development 123
 - 11.6.1 Development of the seedling shoot 123
 - 11.6.2 Initiation of new buds, leaves and shoots and seasonal termination of growth 123
 - 11.6.3 Dormancy and bud break 124
 - 11.6.4 Apical dominance, tropisms and branching habit 124
 - Apical dominance* 124
 - Tropisms* 125
 - Branching habit* 125
 - 11.6.5 Branch angles 126
 - 11.6.6 Phases and rates of shoot growth 126
- 11.7 Factors influencing shoot growth and leaf development 127
 - 11.7.1 Genetic Factors 127
 - Scion* 127
 - Rootstock* 127
 - Plant hormones* 127
 - 11.7.2 Environmental factors 128
 - Climate* 128
 - Soil and site* 129
 - 11.7.3 The influence of tree health on shoot growth 129
 - 11.7.4 Tree management 129
 - Shoot pruning and training* 129
 - Root pruning* 130
 - Root restriction* 130
 - Water and nutrient supply* 130
 - Use of plant bioregulators* 131
 - 11.7.5 Crop loading 131
- 11.8 Modelling shoot and leaf growth 131
- 12 Breeding 136**
H. Schmidt and W.E. van de Weg
 - 12.1 Introduction 136
 - 12.2 Genetical terms and concepts 136
 - 12.3 Taxonomy and breeding relations 137
 - 12.4 Breeding aims 137
 - 12.5 Breeding methods 138
 - 12.5.1 Creating genetic variability 138
 - Crossing* 138
 - Mutagenesis* 138
 - Genetic transformation by bacteria and viruses* 138
 - Somatic hybridization* 139
 - Doubled haploids* 139
 - 12.5.2 Selection 139
 - 12.5.3 Evaluation and release 140
 - 12.6 Raising of seedlings 141
 - 12.7 Fruit quality and yield 141
 - 12.8 Ripening and shelf life 142
 - 12.9 Breeding for growth habit 142
 - 12.10 Frost tolerance 142
 - 12.11 Breeding for resistance 142
 - 12.11.1 Fungal diseases 142
 - Scab* 142
 - Apple mildew* 145
 - Nectria canker* 146
 - Collar or crown rot* 147
 - 12.11.2 Bacterial diseases 147
 - Fire blight* 147
 - 12.11.3 Virus diseases 147
 - Plum pox* 147
 - 12.11.4 Pests 148
 - Raspberry aphids* 148
 - Apple aphids* 148
 - Pear psylla* 148
 - Codling moth* 148
 - 12.11.5 Multiple resistances to diseases and pests 148
 - 12.12 Rootstock breeding 149
 - 12.13 Closing remarks 149
- 13 Rootstocks and interstems 156**
S.J. Wertheim and A.D. Webster
 - 13.1 Introduction 156
 - 13.2 Rootstock breeding and selection 156
 - 13.3 Rootstock clones for deciduous fruit crops 156
 - 13.3.1 Apple 157
 - 13.3.2 Pear 157
 - 13.3.3 Sweet and sour cherry 157
 - 13.3.4 Plum and prune 159
 - 13.3.5 Peach and apricot 159
 - 13.4 Rootstock and interstem influences on scion vigour and habit 159
 - 13.4.1 Rootstock and its influence on vigour 159
 - 13.4.2 Interstems and their influence on scion vigour 161
 - 13.5 Differences between the root systems and morphology of rootstocks 161
 - 13.6 Rootstock influence on precocity, yield efficiency and biennial bearing 162
 - 13.7 Rootstock influence on scion fruit quality and leaf composition 163
 - 13.8 Graft compatibility of rootstocks and scions 164
 - 13.8.1 Possible mechanisms of localized GI 165
 - 13.8.2 Methods for early detection of GI 165
 - 13.9 Rootstock resistance to abiotic stresses 165
 - 13.9.1 Unfavourable soil temperatures 165
 - 13.9.2 Water logging 166
 - 13.9.3 Drought 167
 - 13.9.4 Lime-induced chlorosis 167
 - 13.10 Rootstock resistance to biotic stresses 168
 - 13.10.1 Insect pests 168
 - 13.10.2 Nematodes 168
 - 13.10.3 Viruses and phytoplasms 168
 - 13.10.4 Fungi 169
 - 13.10.5 Bacteria 169
 - 13.11 Other rootstock features 169
 - 13.11.1 Burr knots 169
 - 13.11.2 Root suckers 170
 - 13.11.3 Poor anchorage 170
 - 13.12 The modes of action of rootstocks 170
 - 13.12.1 Water supply restriction 170
 - 13.12.2 Reduction or imbalance of supply of solutes to the scion 170
 - 13.12.3 Partial incompatibility and production of phenolics 171
 - 13.12.4 Changes in production and movement of plant hormones between rootstock and scion 171
- 14 Pruning 176**
S.J. Wertheim
 - 14.1 Introduction 176
 - 14.2 The fate of buds 176
 - 14.3 Winter pruning 177
 - 14.3.1 Pruning of twigs 177
 - 14.3.2 Pruning of two-year-old branches 178
 - 14.3.3 Pruning of trees 178
 - 14.4 Summer pruning 179
 - 14.5 Root pruning 180
 - 14.5.1 General features 180
 - 14.5.2 Effects on growth characters 180
 - 14.5.3 Effects on fruiting 181
 - 14.6 Ringing, scoring, and notching 181
 - 14.6.1 General features 181
 - 14.6.2 Effects on growth and fruiting characters 182
 - 14.6.3 Effects on fruit size and quality 182
 - 14.7 Bending 183
 - 14.8 Possible mechanisms involved in the tree's responses to pruning techniques 184
 - 14.8.1 Winter pruning 184
 - 14.8.2 Summer pruning 184

- 14.8.3 Root pruning 184
- 14.8.4 Ringing and scoring 185
- 14.8.5 Bending 185
- 15 Planting system and tree shape 190**
S.J. Wertheim
- 15.1 Introduction 190
- 15.2 Light relations 190

- 16 Flower-bud formation 204**
J. Tromp
- 16.1 Introduction 204
- 16.2 Flower-bud development 204
- 16.2.1 Morphogenesis 204
- 16.2.2 Time of flower-bud formation 205
- 16.2.3 Induction 206
- 16.3 The mechanism 206
- 16.3.1 Nutrients and carbohydrates 206
- 16.3.2 Presence of leaves 207
- 16.3.3 Presence of fruits 208
- 16.3.4 Role of shoot growth 210
- 16.4 External factors 211
- 16.4.1 Light 211
- 16.4.2 Temperature 211
- 16.4.3 Water supply 212
- 16.5 Effect of cultural means 212
- 16.5.1 Pruning and bending 212
- 16.5.2 Fertilization 213
- 16.5.3 Effect of bioregulators 214
- 17 Flowering, pollination and fruit set 216**
S.J. Wertheim and H. Schmidt
- 17.1 Introduction 216
- 17.2 The flower structure 216
- 17.2.1 Flower clusters 217
- 17.2.2 Flower quality 217
- 17.3 Pollen production 217
- 17.4 Formation of the egg-cell apparatus 219
- 17.5 Flowering period 220
- 17.5.1 Beginning of flowering 220
- 17.5.2 Duration of flowering 221
- 17.5.3 Flowering overlap 221
- 17.5.4 Prediction of flowering time and flower-bud quantity 221
- 17.5.5 Flowering phenology 222
- 17.5.6 Factors affecting flowering times 222
- 17.6 Pollen germination 222
- 17.7 Pollen tube growth 225
- 17.8 Fertilization, apomixis, and fruit set 226
- 17.8.1 Fertilization 226
- 17.8.2 Apomixis 227
- 17.8.3 Fruit set 227
- 17.9 Ovule longevity and effective pollination period 227
- 17.10 Self and cross incompatibility 228
- 17.10.1 Sporophytic (self) incompatibility (SSI) 228
- 17.10.2 Gametophytic (self)-incompatibility (GSI) 228
 - Self incompatibility* 229
 - Cross incompatibility* 229
- 17.10.3 Mentor and pioneer pollen 231
- 17.11 Xenia and metaxenia 231
- 17.12 Pollen transfer 232
- 17.12.1 Honeybee pollination 232
 - Pollen and nectar* 232
 - Foraging area* 232
 - Limitations of honeybees* 233
 - Number bee hives per ha* 233
- 17.12.2 Other pollinating insects 233
- 17.12.3 Wind pollination 233
- 17.13 Pollenizer range 234
- 18 Fruit growth and development 240**
J. Tromp and S.J. Wertheim
- 18.1 Introduction 240
- 18.2 Fruit set 240
- 18.2.1 Seed development 240
- 18.2.2 Parthenocarpy 241
- 18.2.3 Effect of environmental conditions 241
- 18.3 Fruit growth and development 242
- 18.3.1 Fruit structure 242
- 18.3.2 Fruit growth 242
 - Measurement of growth* 242
 - Rate of growth* 242
 - Cell division and enlargement* 244
 - Fruit shape* 245
 - Fruit colour* 246
- 18.3.3 Fruit skin russetting 247
- 18.3.4 Fruit cracking and splitting 248
 - Introduction* 248
 - Fruit factors* 249
 - External conditions* 250
 - Control* 250
- 18.3.5 Effect of environmental factors on fruit growth and development 251
 - Light* 251
 - Temperature* 251
 - Water* 253
- 18.4 Fruit nutrition and water relations 254
- 18.4.1 Fruit carbohydrate nutrition 254
 - Sink and source* 254
 - Fruit photosynthesis* 255
- 18.4.2 Fruit water supply and transpiration 256
- 18.4.3 Mineral nutrition of the fruit 257
- 18.5 Flower and fruit drop 258
- 18.5.1 Introduction 258
- 18.5.2 General principles 259
- 18.5.3 First drop 260
- 18.5.4 June drop 260
- 18.5.5 Mature fruit drop 262
- 19 Manipulation of growth and development by plant bioregulators 267**
S.J. Wertheim & A.D. Webster
- 19.1 Introduction 267
- 19.2 Plant bioregulators 267
- 19.2.1 General aspects 267
- 19.2.2 Mode of application and uptake 267
- 19.3 Regulation of vegetative growth 269
- 19.3.1 Branching 269
 - Methods used to increase feathering of trees in the nursery* 269
 - Methods of increasing branching in the orchard* 270

- 19.3.2 Defoliation of nursery trees 271
- 19.3.3 Growth reduction 271
General aspects 271
Growth retardants and their mechanisms of action 272
Paclobutrazol (PBZ) 273
Prohexadione-Ca (ProCa) 274
Ethephon 275
NAA 275
- 19.3.4 Growth stimulation 275
- 19.4 Regulation of fruiting 276
- 19.4.1 Reduction of excessive crop loading (thinning) 276
General aspects 276
Reduction of flowering intensity 277
Flower thinning 277
Flower thinning compounds 277
Chemical fruit thinning 279
Fruit thinning compounds 279
Factors affecting chemical thinning results 281
- 19.4.2 Enhancement of fruit set 281
Auxins and cytokinins 282
Gibberellins (GAs) 282
Mixtures of auxins, gibberellins, and cytokinins 283
AVG 284
Polyamines 284
- 19.4.3 Delaying and synchronizing the time of flowering 284
- 19.4.4 Mature-fruit drop (pre-harvest drop) 285
Diminishing mature-fruit drop 285
Enhancing mature-fruit drop 286
- 19.5 Control of fruit quality 286
- 19.5.1 Fruit shape and size 287
- 19.5.2 Fruit colour 287
- 19.5.3 Fruit-skin russeting 288
- 19.5.4 Fruit cracking 288
- 19.5.5 Increasing firmness and delaying harvest 288
- 20 Ripening and fruit quality 295**
J. Tromp
- 20.1 Introduction 295
- 20.2 Changes during maturation and ripening 296
- 20.2.1 Respiration 296
- 20.2.2 Ethylene 296
- 20.2.3 Fruit softening 299
- 20.2.4 Starch 299
- 20.2.5 Soluble solids 300
- 20.2.6 Background colour of the skin 300
- 20.2.7 Acidity 300
- 20.2.8 Flavour 300
- 20.3 Fruit Quality 301
- 20.3.1 What is quality? 301
- 20.3.2 Quality attributes 301
Size and shape 301
Colour 302
Freshness 302
Taste 302
Texture 303
Nutritional value 303
Defects of skin and fruit flesh 303
- 20.3.3 Assessing fruit quality 303
- 20.4 Pre-harvest effects 304
- 20.4.1 Environmental factors 304
Temperature 304
Light 305
- 20.4.2 Soil, nutritional factors and water 305
Soil 305
Mineral nutrition 305
Water 307
- 21 Fruit Storage 311**
S.J. Wertheim
- 21.1 Introduction 311
- 21.2 Respiratory metabolism 311
- 21.3 Ethylene 313
- 21.4 Harvest date 314
- 21.5 Regular cold storage (air storage) 316
- 21.6 Controlled atmosphere (CA) storage 317
- 21.6.1 Introduction 317
- 21.6.2 Effects of CA 317
- 21.6.3 CA methods 318
Standard CA 318
Low-ethylene CA storage 319
Blocking ethylene action 319
Adaptations to static CA 320
Dynamic atmosphere storage 320
CA for stone fruit 321
- 21.7 Humidity control 322
- 21.8 Pre-storage factors 322
- 22 Storage disorders and diseases 325**
S.J. Wertheim
- 22.1 Introduction 325
- 22.2 Preharvest factors, calcium and storage quality 325
- 22.3 Tree-related storage disorders 326
- 22.3.1 Water core 326
- 22.3.2 Bitter pit 327
- 22.3.3 Cork spot in pear 328
- 22.4 Low temperature disorders 328
- 22.4.1 Freezing injury 328
- 22.4.2 Chilling injuries 328
- 22.4.3 Low-temperature breakdown 329
- 22.4.4 Superficial scald 329
- 22.5 Injuries caused by storage-room air composition 331
- 22.5.1 External and internal CO₂ injury 331
External CO₂ injury 331
Internal CO₂ injury 331
- 22.5.2 Core flush 333
- 22.5.3 Low-oxygen injury 333
- 22.6 Senescent breakdown 333
- 22.7 Storage diseases 334
- 22.7.1 Occurrence and pre-harvest factors 334
- 22.7.2 Non-chemical control of decay 334
Storage conditions 335
Heat treatments 335
Microbial antagonists 336
Other methods 336
- 22.8 Insects 337
- 23 Pest ecology and management 341**
L. H. M. Blommers
- 23.1 Introduction 341
- 23.2 Arthropod life 341
- 23.2.1 Juvenile development and life cycle 341
Moulting 341
Metamorphosis 341
Life cycles 341
- 23.2.2 Temperature dependent physiology 342
- 23.2.3 Dormancy and diapause 342
- 23.2.4 Remote sensing 344
- 23.3 Orchard faunistics 344
- 23.3.1 Arthropod diversity 344
- 23.3.2 The orchard as a community of life 345
- 23.3.3 The orchard as island 346
- 23.4 Arthropod population dynamics 346
- 23.4.1 Reproductive capacity 346
- 23.4.2 Abiotic mortality factors 347

- 23.4.3 Biotic mortality factors 347
Tree effects 347
Effects of antagonists 348
Quantification of natural control 350

- 24.5.4 Plant bioregulators 366
- 24.6 Disease control and integrated pest management 367
- 25 Integrated and organic weed control in pome and stone fruit 372**
D. Gut and F.P. Weibel
- 25.1 Introduction 372
- 25.2 Main weeds 372
- 25.2.1 Alleyways 372
- 25.2.2 Tree strips 372
Annual weeds and grasses 372
Perennial weeds 373
- 25.3 Damage and damage thresholds 373
- 25.3.1 Damage in the alleyways 373
- 25.3.2 Damage in the tree strips 373
- 25.3.3 Time-dependent damage threshold 373
- 25.4 Principles of weed control 373
Alleyways 373
Tree strips 373
- 25.4.1 Chemical weed control 374
Weed control with residual herbicides 374
Weed control without residual herbicides 374
- 25.4.2 Mechanical weed control 374
- 25.4.3 Thermal weed control 374
- 25.4.4 Tree-strip covers 374
- 25.4.5 Competing weeds through sowings 375
- 25.4.6 Weed regulation on tree strips by green winter covers 375
- 25.5 Particulars of organic fruit growing 375
- 25.5.1 Soil management before planting 375
- 25.5.2 Problem zones around trunks 375
- 25.5.3 Most interesting weed-control equipment and methods 375
- 26 Virus diseases in pome and stone fruit 378**
G.P. Jongedijk
- 26.1 Introduction 378
- 26.2 On the outskirts of living nature - towards a definition of viral identity 378
- 26.3 Classification and nomenclature of viruses 380
- 26.3.1 Formal classification of viruses 380
- 26.3.2 Division of viruses according to their particle shape 380
Viruses with threadlike particles 380
Viruses with isometric particles 381
- 26.3.3 Practical grouping according to symptoms 381
Viruses causing symptoms on the leaf 381
Viruses causing symptoms on branches and trunks 381
Viruses causing symptoms on fruits 381
"Latent" viruses 381
- 26.4 Viruses and disease development 382
- 26.4.1 Real parasitism 382
- 26.4.2 Viral proteins 383
- 26.4.3 Host proteins 383
- 26.4.4 Plant hormones 383
- 26.5 Transmission and infection 383
- 26.5.1 Mechanical transmission 383
- 26.5.2 Propagation material 383
- 26.5.3 Insect vectors 383
- 26.5.4 Nematode vectors 384
- 26.5.5 Fungal vectors 384
- 26.5.6 Via seed and pollen 384
- 26.6 Methods for detection 385
- 26.6.1 Microscopical methods 385
- 26.6.2 Biological techniques 385
Sap inoculation 385
Indexing on woody indicators 385
- 26.6.3 Serological techniques 385
- 26.6.4 Molecular techniques 385
- 26.7 An underestimated problem - virus disease in the nursery and the orchard 386
Graft union problems 386
Bud take failure 386
Witches' broom 386
Declining of trees 386
Symptoms on the fruit 386
